

TASKS DETAILS

EASY	1.				
	CyclicRotation				
	Rotate an array to the right by a given number of steps.	Task Score	Correctness	Performance	
		100%	100%	Not assessed	

Task description

An array A consisting of N integers is given. Rotation of the array means that each element is shifted right by one index, and the last element of the array is moved to the first place. For example, the rotation of array $A = [3, 8, 9, 7, 6]$ is $[6, 3, 8, 9, 7]$ (elements are shifted right by one index and 6 is moved to the first place).

The goal is to rotate array A K times; that is, each element of A will be shifted to the right K times.

Write a function:

```
def solution(A, K)
```

that, given an array A consisting of N integers and an integer K , returns the array A rotated K times.

For example, given

```
A = [3, 8, 9, 7, 6]
K = 3
```

the function should return $[9, 7, 6, 3, 8]$. Three rotations were made:

```
[3, 8, 9, 7, 6] -> [6, 3, 8, 9, 7]
[6, 3, 8, 9, 7] -> [7, 6, 3, 8, 9]
[7, 6, 3, 8, 9] -> [9, 7, 6, 3, 8]
```

For another example, given

```
A = [0, 0, 0]
K = 1
```

the function should return $[0, 0, 0]$

Given

```
A = [1, 2, 3, 4]
K = 4
```

the function should return $[1, 2, 3, 4]$

Assume that:

Solution

Programming language used: Python

Total time used: 2 minutes ?

Effective time used: 2 minutes ?

Code: 23:22:46 UTC, py,
final, score: 100

[show code in pop-up](#)

```
1 def shift_array(array):
2     if not array:
3         return array
4     last = array.pop()
5     array.insert(0, last)
6     return array
7
8
9 def solution(A, K):
10     result = A
11     for i in range(K):
12         result = shift_array(result)
13     return result
```

Analysis summary

The solution obtained perfect score.

- N and K are integers within the range [0..100];
- each element of array A is an integer within the range [−1,000..1,000].

In your solution, focus on **correctness**. The performance of your solution will not be the focus of the assessment.
